A2. AFFORDABLE HOUSING TRAJECTORY

1. INTRODUCTION

- 1.1 I have prepared this short rebuttal proof to address in writing selected matters raised in the written evidence of Mr Ben Pycroft and Mr Stephen Harris. For the avoidance of doubt, where issues are not addressed herein it should not be interpreted as an acceptance of the appellant's position.

2. HOUSING REQUIREMENT

- 2.1 The housing requirement is one of the two issues for the Inquiry. Both main parties recognise that a review of the housing requirement was undertaken in 2017 through the production of a SHMA and then the signing of MOU1. Mr Pycroft's evidence however goes on to state in Para 7.21 – 7.22 that whilst the review of CS Policy 4 took place before the July 2018 Framework was published and the standard method introduced, the Framework is clear that it should continue to be used for five year land supply purposes. Footnote 37, he says, was introduced without any transitional arrangements. He argues, in effect, that a review can only happen once every five years. He draws these conclusions having regard to Para 68-005 in the Housing Supply and Delivery Section of the PPG.
- 2.2 The evidence of the appellant's witnesses on this matter have had no regard to the specific section of the PPG which deals with Plan Reviews, which is contained within Section 61 (Plan Making). This is particularly surprising given a) this is the element of the PPG which is of direct relevance to the interpretation of Footnote 37; and b) this was considered at the previous appeal and by the High Court in its review of the previous decision in this Case, in particular in Ground 3. Indeed, Dove J held that the Claimant need to succeed on both Ground 1 and Ground 3, in order for the claim to succeed (on Ground 1).
- 2.3 I have set out what the PPG says in Para 61-062 regarding *How often a plan or policies should be reviewed* in Para 5.10 in my Main Proof. Having regard to Paras 61-062 and 61-065 in the PPG together with the High Court's findings in respect of Ground 3, it is clear that:
- a). Reviews can be undertaken more frequently than every five years, the PPG stating that policies should be reviewed 'at least once every five years' in Para 61-062. It can thus clearly occur more frequently and, in particular, where there has been a significant change in national policy (as here);
 - b) It is clear that where a review has been undertaken prior to the publication of the revised NPPF (which was first in July 2018), but within the last 5 years, "then the plan will continue to

constitute the up-to-date plan policies **unless there have been significant changes as outlined below.**” Specific consideration does therefore need to be given to whether significant changes have occurred. The approach taken in my evidence is consistent with this.

c). The third component of this Para in the PPG goes on to consider circumstances which relevant strategic policies may require review earlier than the statutory minimum of 5 years and provides examples of ‘significant changes’ which might mean this is necessary. It refers specifically to a significant change in the housing need having regard to a difference between the standard method and the plan requirement.

2.4 The High Court in Ground 3 found that it would be permissible to find the emergence of a local housing need figure which is significantly reduced from that in an extant development plan policy as having the potential to amount to a significant change; and by implication for a development plan policy to be rendered out-of-date. Dove J’s conclusions are set out in Paras 42 and 43 of the Judgement and state:

“Turning to ground 3, it needs to be borne in mind that the passage from the PPG in relation to the need to review plans when there has been a significant change arose in the context of the arguments about whether or not Core Strategy Policy 4(a) was out of date and, in particular, was relied upon in paragraph 37 of the decision as one of the reasons for the Inspector’s conclusion that Core Strategy Policy 4(a) was out of date. Whilst it is fair to observe that the only significant change specifically instanced in the PPG is where a housing requirement is found to be significantly below the number generated using the standard method, in my view this passage of the PPG needs to be read purposefully and as a whole. The third paragraph of the passage of guidance makes clear that a plan will continue to be treated as up to date “unless there have been significant changes as outlined below”. The following paragraph provides some examples where there may have been significant change but, as Mr Cannock points out, the question of whether or not there has been a significant change warranting a review of the plan on the basis that it is not up to date is not curtailed or circumscribed by the contents of the final paragraph.

There may be many material changes in the planning circumstances of a local authority’s area which would properly render their existing plan policies out of date and in need of whole or partial review. I am unable to accept Mr Fraser’s submission that it is impermissible to regard the emergence of a local housing need figure which is greatly reduced from that in an extant development plan policy as having the potential to amount to a significant change. Whilst he is entitled to point to the wider national planning policy context of boosting significantly the supply of housing land, as Mr Cannock points out in his submissions, the use of the standard method to derive local housing need is part and parcel of the Framework’s policies to achieve that objective. Moreover, the question of whether or not any change in circumstances is significant is one which has to be taken on

the basis of not only the salient facts of the case, but also other national and local planning policy considerations which may be involved. In short, in my view, the language of the PPG and its proper interpretation did not constrain the Inspector and preclude her from reaching the conclusion that she did, namely that the significant difference between the housing requirement in Core Strategy Policy 4(a) and that generated by the standard method was capable of amounting to a significant change rendering Core Strategy Policy 4(a) out of date. That was a planning judgment which she was entitled to reach and was properly reasoned in her conclusions.” (Emphasis added)

- 2.5 The wording of both PPG 61-062 and the consideration of this issue in the High Court relate to the local housing need calculated using the standard method. Dove J held that it was permissible for the difference between the standard method LHN and the Core Strategy Policy 4 figure for South Ribble to amount to a significant change rendering the housing requirement in the Core Strategy out-of-date.
- 2.6 My Pycroft’s evidence gives no consideration to whether significant changes have occurred in the scale of housing need.

The Housing Study

- 2.7 Mr Pycroft is critical of the evidence in the Housing Study (CD1.7) which informed the second review (culminating in MOU2), arguing in Para 7.35 of his evidence that “*unlike the SHMA, the Housing Study does not provide an assessment of housing need*” and “*the housing study does not seek to replace the SHMA, which remains the Council’s only evidence in relation to housing need.*” This is not a material criticism and appears to fundamentally misunderstand the nature of the significant change which national policy has brought in. For the reasons set out in my main Proof in Paras 5.31 – 5.36, the Government has replaced the process of defining OAN which was used in the SHMA with the standard method as a simpler, quicker and more transparent means of establishing an area’s housing need. There is, therefore, no need for the Housing Study to undertake an assessment of housing to “replace” the SHMA because this is precisely what the NPPF/NPPG has done with the introduction of LHN and the standard methodology.
- 2.8 Indeed, one of the main reasons for the introduction of the Standard Methodology was to *avoid* LPA’s having to undertake time-consuming, costly and complex assessments of housing need in SHMAs.
- 2.9 The SHMA OAN analysis is plainly out-of-date and inconsistent with the standard methodology in the NPPF. It followed a methodology for calculating housing need in Planning Practice Guidance which has since been substantively removed and superseded. There was, therefore, no need for

-
- the Housing Study to additionally consider the LPA's housing need, as this is set by the standard methodology.
- 2.10 The standard method figure, and the difference to the Policy 4 housing requirement, is clearly material to whether the housing requirement is up-to-date (as Dove J has expressly decided).
- 2.11 The JAC Report of 4th June 2019 (CD5.1) states that the Housing Study was commissioned to provide the necessary housing needs analysis required by the NPPF. This is again referred to in the Paper to the report to the 3rd September 2019 meeting (CD5.2, Para 9). The fundamental element of the change in national policy for housing introduced by the revised NPPF was the introduction of the standard method, replacing the approach to calculating OAN which had been used in the 2017 SHMA.
- 2.12 The Housing Study does not *fully* replace the SHMA, as there were elements of the SHMA which did not need updating, such as its assessment of the housing market geography and baseline housing stock profile (which relied principally on 2011 Census data) but the fundamental change in approach to how overall housing need was expected to be calculated introduced through the revised NPPF clearly meant that the SHMA analysis of overall housing need required reconsideration.
- 2.13 My Pycroft seeks to develop the point in Paras 7.36 – 7.39 of his main Proof having regard to PPG Para 2a-010, the City Deal and the need for affordable housing. I will address each point in turn. However before I do, it is worth setting out two more general points.
- 2.14 First, NPPF Para 60 directs that local housing need should be assessed using the standard method "*unless exceptional circumstances justify an alternative approach.*" This is a high bar and demonstrates that the Government clearly expects the standard method to be used in the usual course of events. Further, I do not see that there are exceptional circumstances in this Case to deviate from use of the standard method in the determination of Appeals in this Housing Market Area. Indeed, that has been the position in Chorley (see Pear Tree Lane Decision, CD6.2) and I consider that there should be consistency in the figures used for the determination of 5YHLS across the HMA. In this case, the Appellant's approach would lead to be a materially *different* approach being taken between a) Preston/South Ribble; and b) Chorley, when they are in the *same* HMA.
- 2.15 Secondly, I note that the PPG definition of LHN has been amended by Government with the intention of limiting consideration of these issues in a decision-making context such as this. It defines local housing need as follows:

“The number of homes identified as being needed through the application of the standard method set out in national planning guidance (or, in the context of preparing strategic policies only, this may be calculated using a justified alternative approach as provided for in paragraph 60 of this Framework).”

- 2.16 It is clear from this that it is not (respectfully) for an Inspector in a s78 inquiry to seek to resolve whether a figure *above* the standard method should be planned for in the future through the Local Plan process. This is consistent with the two-stage approach adopted by the Court of Appeal in **Hunston**.
- 2.17 Accordingly, despite the points raised by Mr Pycroft (Paras 7.28 – 7.48), this appeal falls to be determined on the basis of *either* the figure in Policy 4 JCS *or* the figure derived from the standard method. There is no basis on which this appeal can be determined on the basis of the standard method figure *plus* an uplift.

The City Deal

- 2.18 Para 2a-010 in the PPG identifies circumstances where it may be the case that housing need exceeds past trends, It sets out that such circumstances may include where there are “growth strategies for an area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. housing deals)”, or “strategic infrastructure improvements that are likely to drive an increase in the homes needed locally.”
- 2.19 The Housing Study considered this (CD1.7, Paras 3.28 – 3.37) and, as I set out in my main Proof at Para 5.82, Icení found that the City Deal would help to unlock a number of housing and employment sites (addressing infrastructure constraints to delivery of supply) but did not suggest or indicate a higher level of housing need (CD1.7 Para 3.37).
- 2.20 The City Deal is not an expression of housing need and should not be treated as such. The City Deal is not a Development Plan (or any other form of adopted policy) and should not override national and local policy. Rather, it is a delivery vehicle only, to provide infrastructure in the area.
- 2.21 I note the following at paragraph 6.65 of Mr Harris' main Proof: *“It cannot be said that the lack of delivery is due to developers not delivering as from my experience the LPA has sought to delay and frustrate allocated sites from getting planning permission which has resulted in planning refusals and appeals.”* This is clearly a throw away comment with no evidence to support that position. The LPA denies that it has sought to delay and frustrate allocated sites. Of the larger

named City Deal sites in South Ribble,¹ all bar the Vernon Carus Site and Pickering's Farm have got at least outline planning permission and most have a detailed implementable consent. In the case of Pickering's Farm, a masterplan and an outline application have been submitted to South Ribble as the LPA. They will be determined in due course. Mr Harris' assertion is therefore unfounded.

- 2.22 Both Mr Harris and Mr Pycroft refer to the City Deal having a target of 2024 for delivery. The agreed City Deal Heads of Terms have a "run-on" included within them, which provides for a 10+5 year City Deal. This would take the City Deal to a 2029 end date. That allowance is built in deliberately due to the likelihood of changes in the housing market within the Preston and South Ribble area during such a timeframe.
- 2.23 The City Deal is currently undergoing a mid-term review and is currently in discussion between the City Deal partners. These discussions are not yet concluded. The conclusion in both Mr Harris and Mr Pycroft submissions are simplistic, in that they think the way forward is purely about housing numbers. Indeed, a number of options are being discussed between the City Deal partners as part of the review which may include re-prioritising infrastructure provision to reduce infrastructure costs and different ways of funding that are not reliant on income generated from housing provision.
- 2.24 The Councils and I have had regard to these issues and concluded that the City Deal should not be confused with the true expression of need, which is clearly stated in national policy as the standard method. The City Deal does not provide a basis for departing from the level of housing need set out in national policy through the standard methodology.

Affordable Housing Need

- 2.25 Mr Pycroft states in Para 7.39 of his main Proof that the annual net need for affordable housing in South Ribble is 208 per annum, which is higher than the local housing need using the standard method. However the Housing Study makes no recommendation that the housing requirement figure should be higher than the standard method. This is not part of the calculation of housing need for the purposes of the NPPF. Rather, this might be an issue for the next iteration of the local plan.
- 2.26 The Housing Study makes no recommendation that the housing requirement figure should be higher than the standard method because there was no clear evidential basis for doing so. It is important to understand that the affordable housing need is not an expression of net additional

¹ Pickering's Farm, Moss Side Test Track, Hatherleigh, Vernon Carus, Altcar Lane, Lostock Hall Gasworks

households requiring homes. It is a function (to a significant degree) of a tenure imbalance within the existing housing stock (see CD1.7 Para 5.47).

2.27 Of the components of the need (as shown below), newly-forming households is derived from household projections which are already counted within the standard method. Existing households falling into need are existing households now who by moving would release their existing property for another household. There is therefore no *additional* housing needed to house these households.

2.28 The current need does include some additional households who are either homeless or concealed. The detailed analysis for South Ribble showed 622 households with a current need, of which 342 were concealed or homeless. However, the affordability adjustment in the standard method of 16% (see CD1.7 Table 3.2) would deliver an additional 502 dwellings over the 18 year period considered, more than addressing the scale of concealed/ overcrowded households.

Table 2.1 Estimated Need for Rented Affordable Housing (per annum) – 2018-36

	Chorley	Preston	South Ribble	Central Lancashire
Current need	30	76	35	141
Newly forming households	360	418	283	1,061
Existing households falling into need	163	311	128	602
Total Gross Need	553	806	445	1,804
Re-let Supply	369	631	273	1,273
Net Need	184	175	172	530

2.29 The SHMA took account of ***Kings Lynn & West Norfolk BC v SSCLG & Elm Park Holdings*** [2015] EWHC 2464 (Admin) which I enclose as **Appendix A2**. As the SHMA outlines in Paras 6.75 – 6.79, this set out that affordable housing needs should be considered in determining the OAN but there is no requirement for the affordable need to be met in full, as in practice very often the calculation of unmet affordable housing need will produce a figure which the authority has little or no prospect of delivering in practice.

2.30 Having regard to the affordable housing evidence, the 2017 SHMA recommended a 10% uplift was applied to the demographic starting point to take account of the affordable housing need (CD1.4 Para 10.26). The standard method affordability adjustment is a higher (14%) adjustment. The affordable housing need does not therefore provide a basis *per se* for concluding that the Core Strategy figure remains up-to-date.

Economic Growth

- 2.31 The other main consideration in the SHMA related to supporting economic growth. As I have explained in my main Proof in Para 5.84, the inclusion of a step seeking to align housing need and economic growth has been specifically removed by Government in calculating housing need. The methodology employed by the SHMA is inconsistent with the NPPF/NPPG and the standard methodology.

Scope of the Housing Study

- 2.32 Mr Pycroft' contention (in Paras 7.29 – 7.33 of his Main Proof) that the Housing Study was somehow limited in scope is incorrect. I interpret the reference in the JAC Report of 29th Jan 2019 to a 'brief' housing study as a recognition that it could build on elements of the work in the SHMA (such as on the housing market geography, characteristics of the local housing market etc). Para 16 is, however, clear that the purpose was to "meet the requirements of the NPPF" and this was again referred to in the 4th June and 3rd September 2019 JAC Reports (CD5.1 and CD5.2) to which Mr Pycoft refers (at Paras 7.30 and 7.32).
- 2.33 As I have set out, both in my main Proof and here, the fundamental element of the change in national policy for housing introduced by the revised NPPF was the introduction of the standard method, replacing the approach to calculating OAN which had been used in the 2017 SHMA. A central element of the rationale for the Housing Study was to consider this.
- 2.34 I consider that the Housing Study's analysis of overall housing need replaces and supersedes that in the SHMA. I can be very clear about this having been closely involved in preparing both reports.

Implications

- 2.35 Having considered the issues raised by Mr Pycroft regarding the housing requirement alongside the evidence set out in my Proof, I remain firmly of the view that the Housing Study represents proportional, relevant and up-to-date evidence from which the conclusion that Policy 4 is out-of-date can be drawn.
- 2.36 My conclusions are reinforced by Mr Harris' commentary in Para 6.87 that the standard method shows a radically different distribution of housing across the HMA to that in CS Policy 4 which supports the case that Policy 4 is out-of-date.
- 2.37 In respect of Mr Pycroft's comments on the 2020 Pear Tree Lane Appeal Decision (CD6.2), it is correct and should be noted that neither of the main parties (neither developer nor LPA) considered Policy 4 to be up-to-date (Para 20). That is consistent with the case of South Ribble at this Inquiry and Preston CC at the Cardwell Farm Inquiry. Further, having appeared at the Pear Tree Lane

Inquiry, I know that the Inspector heard evidence on the background, the SHMA, the Housing Study and both MOUs and came to the conclusion in Para 48 that Policy 4 was out-of-date having regard to the date of the RS evidence, and the introduction of the standard method. The Inspector described national policy as being ‘very different’ to that in 2017 (Para 34). This decision on this point is a material consideration of very significant weight in the determination of this Appeal and has informed (to an extent) the position of this LPA.

- 2.38 It is clearly appropriate that there is a consistent basis for applying the housing requirement across the three authorities. That basis should be the housing need figure derived applying the standard methodology figure in up-to-date NPPF. Indeed, as Dove J held (*supra*), it is the application of the standard methodology which seeks to boost significantly the supply of housing.

3. HISTORICAL HOUSING DELIVERY

- 3.1 Mr Pycroft’s evidence sets out in Tables 3.1 – 3.6 and Charts 3.1 – 3.6 a comparative assessment of previous forecasts of housing supply against recorded dwelling completions. I do not consider this to be of any material assistance to the Inquiry and/or the determination of this Appeal.
- 3.2 Firstly, I would comment that there is a conceptual difference between the deliverable supply and what is delivered. This was addressed by the Court of Appeal in *St Modwen v. SSCLG & East Riding of York Council*² which found that deliverability is not the same as delivery and outlining that the fact a site is capable of being delivered does not mean that it necessary will be, because (essentially beyond the granting of planning consent) a local authority cannot control whether or when a landowner or housebuilder brings a site forwards.
- 3.3 Secondly, I would note Mr Pycroft’s conclusions at Para 3.3 that this historical difference between delivery expectation and delivery is because of a heavy reliance on sites without detailed planning permission which have not come forward as expected. However, for the purposes of this Inquiry, I note that there is now a reasonably narrow difference in the main parties’ assessment of the deliverable supply where there are just two sites remaining in dispute. In that context, previous criticisms of previous assessments on materially different evidence is of no material relevance.

² *St Modwen Developments Ltd v SSCLG & East Riding of Yorkshire Council* [2017] EWCA Civ 1643

-
- 3.4 Indeed, the LPA does not consider the difference in the assessed supply (which is marginal and relates to 2 sites and a windfall allowance) to be material to any issue on either the LPA's or the Appellant's written evidence.

4. AFFORDABLE HOUSING

- 4.1 Ben Pycroft's Appendix B11 seeks to set out a trajectory of affordable housing. I have considered this, with assistance from the Council's Strategic Housing Officer, and consider that the current information indicates delivery of 340+ affordable homes over the five year period. My updated table is included as **Appendix A2**.
- 4.2 I would also note that the table of affordable housing completions historically presented in Ben Pycroft's evidence in his Table 13.2 relates to new-build development only. I have compared this to MHCLG Live Table 1011C (Affordable Housing Supply Statistics) which additionally measures affordable housing delivery through other means, including purchase of existing properties. This indicates that over the 2003-20 period, affordable housing supply in South Ribble was 1011 dwellings – 26% higher than indicated by Mr Pycroft.
- 4.3 The potential for the tenure imbalance to be shifted through purchase of existing stock by the Council/ Registered Providers is entirely overlooked in Mr Pycroft's evidence.

5. SAFEGUARDED LAND

- 5.1 Mr Harris claims in Paras 5.1 and 5.2 that the site falls in an area specifically identified for growth in the development plan forming part of a strategic location south of Penwortham/ north of Farington. He goes on in Para 5.7 to outline his view that the safeguarding of the land establishes that the use and location of this land is suitable for meeting South Ribble's development needs if required. This is not correct.
- 5.2 A broad location was identified in the Core Strategy, but this has since been refined through the 2015 Local Plan which allocates the Pickerings Farm Site (EE) and safeguards land in S2 and S3. The Local Plan has thus addressed where development will occur within the broad location.

-
- 5.3 The application site is not adjacent to Site EE, as Mr Harris suggests in Para 6.100 in his Proof, but is separated from it by other safeguarded land (Site S2).
- 5.4 I note that whilst Mr Harris sets out that he provided representations to and attended the Local Plan Examination, he makes no reference in his Proof to the Inspector's Report (CD1.14). Paras 48 and 49 therein noted in respect of S3 that "*the Council's assessment of the sites was that they form part of a separation and natural break in the built environment between the built-up areas of Penwortham, Farington and Lostock Hall.*" This was one of the reasons the Inspector cites in the safeguarding of this land. It is therefore wrong to conclude, as Mr Harris does, that the safeguarding establishes the use of the land for meeting housing need at some point in the future. It does not – the land could equally be designated in a future plan as a settlement gap or green infrastructure. The position is addressed in the NPPF at 139(c) and (d). The site is identified to meet "longer term development needs stretching well beyond the plan period" (if there is such a development need). Safeguarded land is not allocated and "should only be granted following an update to a plan which proposes the development". There is no such plan which proposes the site for development at all. The proposal is therefore contrary to the development plan and NPPF 139(c) and (d).
- 5.5 Mr Harris' suggestion in Para 7.12 – 7.17 in his Proof that the Council's concerns regarding comprehensive development can be boiled down essentially to how the site is accessed fundamentally misses the point regarding the Council's concerns regarding its inability to coordinate development in a sensitive area, the separation and natural break between settlements, coordination of infrastructure provision, and effective public engagement through the process. Mr Harris' evidence does not address these issues. Indeed, this was the conclusion of the Inspector in refusing the appeal after the last Inquiry (in part of the decision which was not the subject of challenge).

1. **MR JUSTICE DOVE:** Clenchwarton is a village to the west of King's Lynn. In the July 2011 Core Strategy published and adopted by the claimant, it is identified as a key rural service centre which is suitable for local scale development. The claimant is the local planning authority for the area concerned and the second defendant is the owner of the Foster's Sports Ground, Main Road in Clenchwarton. It is a site towards the western end of the settlement within land designated countryside in the proposals map of the 1998 King's Lynn and West Norfolk local plan.
2. On the 2 November 2011 the second defendant applied for outline planning permission for 75 dwellings which was refused by the claimant and there was an appeal to the first defendant. That appeal was dismissed on 12 November 2012. The issues which were included in the determination of that appeal were whether or not the claimant could demonstrate a five-year supply of housing land. The Inspector in determining that appeal concluded as follows:

"8. Taking account of the housing completions between 2001 and 2011, there is a total five year housing requirement for 3,275 dwellings. Adding an additional 5% buffer, in accordance with paragraph 47 of the National Planning Policy Framework (framework). The 5 year requirement rises to 3,439 dwellings, which is equivalent to 688 dwellings per annum.

9. The Council's Annual Monitoring Report, December 2011, published in April 2012, identifies a supply of sites for 3,276 which equates to some 4.76 years' supply. However, paragraph 48 of the Framework permits making an allowance for windfall sites within the 5 year supply where Councils have compelling evidence that such sites have consistently become available in the local area and will continue to provide a reliable source of supply. Given the Council's experience of the contribution of windfall sites to the housing supply over an 11 year period, together with the unusually large geographical area of the Borough and the high number of settlements within the Borough, I accept that the Council's suggested allowances for windfall sites based on 70% of past rates, is realistic in this instance. On this basis, there is a deliverable housing land supply of around 6.03 years."

3. Following that decision, the second defendant reconsidered its position. It amended its proposal to 40 dwellings to respond to criticisms raised by the Inspector in respect of landscape impact. On 12 December 2013 the Court of Appeal decision in the case of City and District Council of St Albans v Hunston Properties Limited and the Secretary of State [2013] EWCA Civ 1610 was handed down with its implications in relation to the interpretation of paragraph 47 of the NPPF (hereafter "the Framework") to the housing requirement when calculating a five-year supply of housing. It is worthwhile at this stage to set out the relevant provisions of the Framework in paragraph 47 which are as follows:

"47. To boost significantly the supply of housing, local planning authorities should:

- o use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying

key sites which are critical to the delivery of the housing strategy over the planned period;

- o identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land..."

4. On 27 July 2013 the second defendant applied for outline planning permission for 40 dwellings. The application was refused on 22 November 2013 by the claimant and the second defendant appealed. The appeal was determined by one of the first defendant's Inspectors using the hearing mode of appeal determination. The procedures in relation to the hearing evolved in the following manner. Firstly, the second defendant's statement of case prepared in May 2014 arrived with the claimant in early June. Secondly, on 12 September 2014, the claimant prepared and submitted a response to that document. Thirdly, on 28 November 2014, the second defendant responded to the claimant's case in relation to housing land supply. Fourthly, on the 2 December 2014, the planning Inspectorate on behalf of the first defendant requested that the claimant clarify its position on the housing land supply evidence provided by the second defendant in a further submission due by 5 December 2014. Fifthly and finally, on 5 December 2014, the claimant submitted (in accordance with the request which had been made by the Planning Inspectorate) further documentation in support of its position in relation to housing land supply.

5. As will be evident from that chronology, once again the question of whether or not the claimant enjoyed a five year supply of housing land was in issue. A number of the ingredients of the calculation were, in particular, at odds between the claimant and the second defendant so far as is relevant to this case. They were as follows:

(a) The requirement. The claimant still relied upon the requirement from its Core Strategy as representing their Full Objectively Assessed Need for housing (FOAN) reliant on the Core Strategy housing figure of 660 dwellings per annum. They had taken into account work which they had commissioned as a Strategic Housing Market Assessment (SHMA) and considered that it corroborated the figure which was in their Core Strategy. This SHMA exercise which was prepared as part of the evidence base for the emerging local plan showed a FOAN of 690 dwellings per annum. The second defendant's consultants contended that the SHMA analysis was incomplete and did not account for either existing unmet need (which had been deduced from the SHMA as standing at around 1500 dwellings at the time of the second defendant's analysis), or the rate of vacancies at a rate of 3 per cent derived from the 2011 census, or second homes together with the vacancies at a rate of 14.9 per cent (again derived from the figure for household spaces with no usual residents which was provided by the 2011 census data). Adding vacancies alone gave (in the second defendant's analysis) an annual figure of 711 dwellings per annum; adding vacancies and second homes gave a figure of 793 dwellings per annum and finally, adding an element of unmet need together with vacancies and second homes, gave a total figure of 872 dwellings per annum.

(b) The buffer. The second issue was whether the claimant was a five per cent or a 20 per cent authority. Although initially the second defendant's

consultants had accepted that the claimant was a five per cent authority, they subsequently contended for 20 per cent on the basis that in the previous 6 years the claimant had not met the Core Strategy requirement of 660 dwellings per annum, and that since 2001 the annual average of completions had been 622 dwellings per annum, again below the Core Strategy target. The claimant responded by pointing out that the 622 dwellings per annum figure covered a period of economic recession and further argued that development rates were rising as a result of the production of a site allocation document which was about to proceed to its pre-submission stage. A graph was produced by the claimant illustrating the broad correlation between completion rates and the Core Strategy requirements.

(c) The question of windfalls. By the time of the hearing, the differences between the claimant and the second defendant were as follows. The claimant, based on past trends, relied upon a supply from large windfalls of 670 dwellings and the second defendant allowed for none. In relation to small windfalls, again based on past trends, the claimant included 470 dwellings within their five-year supply and the second defendant, who had vacillated between a number of positions on this issue, finally decided to include 268 dwellings.

(d) Allocations emerging in the pre-submission Site Allocations and Development Management Document. These were also the subject of contention. They were contained in a document which had been approved for consultation by the claimant on 27 November 2014. That consultation was due to occur in January and February 2015. The claimant included some 2,303 dwellings from this source of supply in their five-year calculation. The second defendant allowed none.

6. The hearing was allocated two days. At the hearing the Inspector led a discussion of the issues following an agenda which he had constructed for this purpose. The third issue on that agenda was housing land supply. When the claimant came to present its case following the submissions on behalf of the second defendant, it became clear that owing to computer problems the claimant's submissions of 5 December 2012 together with the supporting documentation had not in fact been received by the Inspector and he had not seen them. Copies were provided to him at the hearing. The Inspector chose to press on without adjourning to read the documentation. Mr Jermany who was not leading the counsel's case (which was in fact led by the case officer for the application, Mrs Wood-Handy) but who was its expert on housing land supply, records his concerns in relation to what occurred in a witness statement as follows:

"I felt at a disadvantage trying to pick out relevant parts of my statement, without reading it in full, while knowing that Inspector had not had a chance to read it and had not had a chance to understand and review the supporting documents in advance and to properly question me and Hannah [Mrs Wood-Handy] about them."

7. It is apparent from a contemporaneous note provided by one of the second defendant's team at the hearing, that the discussion ranged over each of the disputed elements which I have set out above. In relation to the emerging allocations, reference was made during the course of the of discussion to the case of Wainhomes (South West) Holdings Limited v Secretary of State [2013] [EWHC](#) 597 to which I shall turn shortly. In relation to the appropriate FOAN for consideration in calculating the five-year housing supply, mention was made of the case of Hunston Properties.

8. On 2 January 2015 the decision on the appeal was published and the appeal was allowed. The Inspector's conclusions on housing land supply were set out as follows.

"6. The Council considers the CS figure of 16,500 dwellings in the period 2001 to 2026 (660 dwellings per annum) to be the correct requirement and

claims that the 2013 Strategic Housing Market Assessment (SHMA) update still supports that as a realistic figure. The Council's methodology was used in the previous appeal relating to 75 dwellings and was not challenged in the High Court. However, the CS is based on what are now old household projections. Indeed the Council notes that the Framework 'makes reference to keeping plans up to date and therefore under review' and the Inspector in the previous appeal states at paragraph 12 of her decision, issued in November 2012, that 'The Council will need to re-visit its housing provision in the light of more recent household projections and to keep its housing supply in line with the evidence base in the future'. That is the approach adopted by the appellant in this case.

7. Indeed, the SHMA explains that there would be a requirement of 690 households per annum. Households do not equate to dwellings and allowance should be made for vacancies and second homes. The 2011 census records that King's Lynn has 14.9% vacancies and second homes, which would give a full objectively assessed need (FOAN) of 793 dwellings a year. If, as a minimum, only vacancies are considered, it is generally recognised that a figure of 3% should be used giving a requirement of 711 dwellings per annum. A minimum of 51 additional dwellings a year, and possibly as many as 133, over and above the CS requirement of 660 does not suggest that the CS requirement is still realistic. Indeed, over a 15 year period that equates to a minimum need for in excess of 750 additional dwellings.

9. Considering the appropriate buffer to be applied, Framework paragraph 47 indicates that a 5% buffer should be added 'to ensure choice and competition.' However, where there has been a record of persistent under delivery, the buffer should be increased to 20%. The Guidance confirms that there is no universal test for persistent under delivery and sets out that the assessment of local delivery is likely to be more robust if a longer term view is taken.
10. In each of the last 6 years the Council has failed to achieve its requirement of 660 dwellings per annum and has only averaged 447 dwellings a year. The Council notes that the trend from 2011 to 2014, which includes the recession between 2008 and 2013, is running at 622 dwellings per annum. Although development rates are rising, and the Council published its Pre-Submission Site Allocations and Development Management Document in October, which it is acknowledged would release the full plan provision of new sites, the long term trend is behind the target of 660 dwellings per annum with a shortfall of some 487 dwellings in the period to date. This indicates that the Council has persistently under provided and so a 20% buffer should be applied....
11. In relation to windfalls, paragraph 48 of the Framework states that an allowance can be made in the five year supply if there is compelling evidence that such sites have consistently become available in the local area, and will continue to provide a reliable source. Between 2001 and 2014, 49% of total completions in the Borough were from windfall sites, and 59% of those were from large sites of more than 10 dwellings. Given that the Council is seeking to adopt a new policy to allow infilling in the smaller villages and hamlets, small sites are likely to continue to provide a reliable source of windfalls. However, given the publication of the Pre-Submission Site Allocations and Development Management Document releasing the full plan provision of new sites, it is likely that the majority of large sites would come from allocations. Rather than there being compelling evidence, as the Framework requires, there is at best only a possibility that some completions would come from large site windfalls and these should therefore be discounted.
12. The appellant raised three queries relating to permissions. Whilst 302 dwellings are under construction at Hillingdon Square, the net result of development is the loss of 17 units. The Council accepts this and -17 is now included in the Housing Trajectory. Secondly, in respect of the Nar Ouse Regeneration Area (NORA), the appellant considers that only 300 of the 554 with outline planning permission are likely to be completed in the 5 year period. Whilst Reserved Matters permissions were granted for a further 185 on 1 December 2014, and a preferred bidder has been approved to deliver 600 units by 2020 on Council and Homes and Community Agency land, there is little evidence to counteract the appellant's

view. Finally, permission on a site north of Gaywood River, King's Lynn has lapsed and an application for 95 dwellings was subsequently refused although a revised application has just been submitted with the applicant claiming to have overcome the outstanding reason for refusal from appeal.

The parties disagree on the figures but again the appellant's are more robust, despite the Council's view that the Guidance on what are deliverable sites, would give greater flexibility and add to the potential 5 year supply of sites.

13. Given the conclusions above, the appellant's calculations are preferred and show that rather than having a 7.51 year supply (based on CS and 5% buffer) as the Council maintains, there would only be a 1.91 year housing supply (based on 2011 housing projections and a 20% buffer). Notwithstanding the Council's view that the policies in CS are consistent with the Framework, as there is no 5 year supply the housing policies, including policies defining settlement boundaries cannot be regarded as up-to-date. Housing applications should, therefore, be considered in the context of the presumption in favour of sustainable development, in accordance with the aims of the Framework."
14. Having considered all of the other matters raised in the context of the appeal, the Inspector concluded that the balance should be struck in support of the grant of planning permission subject to conditions.
15. Procedural Issues and the Grounds in Brief.
16. Before the hearing of this case commenced, I advised the parties that two of the consultants who had advised and appeared for the second defendants in this case were people with whom I had worked on numerous occasions whilst I was still at the Bar and one of whom I knew well personally. None of the parties raised any objection to this and the view appeared to be taken that given the nature of the practice which I had at the bar and, therefore, the knowledge of people who worked within the planning profession, together with the fact that these individuals were providing independent advice and were not the parties themselves, there were no grounds upon which to express any concern in relation to me hearing the case.
17. At the hearing of the case, there was an application by Mr Leader who appeared on behalf of the claimant to amend the pleadings. No one objected to that course being taken and I granted permission. In fact, as the argument evolved during the course of the case, the claimant's claim crystallised into three grounds.
18. The first ground was that in accepting the second defendant's adjustments to the FOAN for vacancies and second homes, the Inspector had unlawfully misapplied paragraph 47 of the framework, in that this adjustment was contended to be a policy adjustment which was illegitimate when identifying the FOAN for the purpose of calculating the five-year housing land supply. It was submitted that such an allowance was not to be found in the Planning Practice Guidance which accompanies the framework as a legitimate adjustment: in fact that document only regarded vacancies as a potential source of supply.
19. The second ground was that in a number of respects, the Inspector's reasons were inadequate. This ground focused in particular on four matters. Firstly, the Inspector's reasons in relation to the FOAN and whether he had concluded it was 793 dwellings per annum or 872 dwellings per annum. Secondly, small site windfalls and the reasons provided by the Inspector as to whether they were a legitimate source of supply were said to be inadequate. Thirdly, the draft allocated sites which were emerging and why the Inspector had discounted them were not the subject of any reasons provided by him. Fourthly, and lastly, it was submitted that the reasons which had been provided to explain why the claimant was a 20 per cent buffer authority, when in 2012 they had been found to be a five per cent authority, were also not legally adequate.
20. The third ground was that bearing in mind the Inspector's inquisitorial role and his responsibility to use the hearing as a process to test the evidence and delve into the issues to assist the decision making process, it was unfair and inconsistent with that duty for him not to have taken time to read and absorb the council's most recent material (which it was accepted he had not received) and then to reflect upon whether his plan for the discussion actually required revision and whether there were other questions which he ought to have posed.

21. The law

22. Planning application are determined under section 70 of the Town and Country Planning Act 1990 and section 38(6) of the Planning and Compulsory Purchase Act 2004. National planning policy is a material consideration for the purposes of the exercise of this discretion. Interpretation of planning policy, including national policy, is a matter of law (see [Tesco Stores v Dundee City Council \[2012\] UKSC 13](#)). As I have set out above, paragraph 47 of the Framework was the subject of interpretation in the [Hunston Properties](#) case, in particular in relation to how determination of the requirement for the five-year housing land supply was to be approached a development control decision. The context of that case was that it was a Green Belt case and the Inspector had concluded that the best available figure for use in the five-year supply calculations was that which was derived from the revoked Regional Strategy. That figure was the most recent independently tested housing figure which reflected amongst other things the Green Belt policy constraint in the local authority's area. By contrast the developer and appellant argued that a figure representing "full objectively assessed needs" for housing should be used in the absence of any figure derived from any element of the development plan. In giving the leading judgment of the Court of Appeal, Sir David Keene observed as follows:

"25. ...I am not persuaded that the inspector was entitled to use a housing requirement figure derived from a revoked plan, even as a proxy for what the local plan process may produce eventually. The words in paragraph 47(1), "as far as is consistent with the policies set out in this Framework" remind one that the Framework is to be read as a whole, but their specific role in that sub-paragraph seems to me to be related to the approach to be adopted in producing the Local Plan. If one looks at what is said in that sub-paragraph, it is advising local planning authorities:

"to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework."

That qualification contained in the last clause quoted is not qualifying housing needs. It is qualifying the extent to which the Local Plan should go to meet those needs. The needs assessment, objectively arrived at, is not affected in advance of the production of the Local Plan, which will then set the requirement figure.

26. Moreover, I accept Mr Stinchcombe QC's submissions for Hunston that it is not for an inspector on a Section 78 appeal to seek to carry out some sort of local plan process as part of determining the appeal, so as to arrive at a constrained housing requirement figure. An inspector in that situation is not in a position to carry out such an exercise in a proper fashion, since it is impossible for any rounded assessment similar to the local plan process to be done. That process is an elaborate one involving many parties who are not present at or involved in the Section 78 appeal. I appreciate that the inspector here was indeed using the figure from the revoked East of England Plan merely as a proxy, but the government has expressly moved away from a "top-down" approach of the kind which led to the figure of 360 housing units required per annum. I have some sympathy for the inspector, who was seeking to interpret policies which were at best ambiguous when dealing with the situation which existed here, but it seems to me to have been mistaken to use a figure for housing requirements below the full objectively assessed needs figure until such time as the Local Plan process came up with a constrained figure.

27. It follows from this that I agree with the judge below that the inspector erred by adopting such a constrained figure for housing need. It led her to find that there was no shortfall in housing land supply in the district. She should

have concluded, using the correct policy approach, that there was such a short fall. The supply fell below the objectively assessed five year requirement.

28. However, that is not the end of the matter. The crucial question for an inspector in such a case is not: is there a shortfall in housing land supply? It is: have very special circumstances been demonstrated to outweigh the Green Belt objection? As Mr Stinchcombe recognised in the course of the hearing, such circumstances are not automatically demonstrated simply because there is a less than five year supply of housing land. The judge in the court below acknowledged as much at paragraph 30 of his judgment. Self-evidently, one of the considerations to be reflected in the decision on "very special circumstances" is likely to be the scale of the shortfall.

29. But there may be other factors as well. One of those is the planning context in which that shortfall is to be seen. The context may be that the district in question is subject on a considerable scale to policies protecting much or most of the undeveloped land from development except in exceptional or very special circumstances, where because such land is an Area of Outstanding Natural Beauty, National Park or Green Belt. If that is the case, then it may be wholly unsurprising that there is not a five year supply of housing land when measured simply against the unvarnished figures of household projections. A decision-maker would then be entitled to conclude, if such were the planning judgment, that some degree of shortfall in housing land supply, as measured simply by household formation rates, was inevitable. That may well affect the weight to be attached to the shortfall."

23. That construction of the policy in paragraph 47 of the Framework was reflected by the Court of Appeal in the plan making context in Solihull Metropolitan Borough Council v Gallagher Estates [2014] EWCA Civ 1610. What the construction does not conclude upon, because the point did not arise, is what the "varnish" is that is applied to the FOAN in order to reach the Framework compliant housing requirement. Alternatively, what are the ingredients that are involved in making the FOAN? In the context of this case, do they include vacancies and second homes? Those are the questions which arise in Ground 1.

24. In respect of Ground 2, a number of essentially uncontroversial legal propositions are in play. The first is the content of the duty to give reasons which is well-known and set out in the South Bucks v Porter no 2 [2004] UKHL 33 in the speech of Lord Brown at paragraph 36 in which he observed as follows.

"36. The reasons for a decision must be intelligible and they must be adequate. They must enable the reader to understand why the matter was decided as it was and what conclusions were reached on the "principle important controversial issues", disclosing how any issue of law or fact was resolved. Reasons can be briefly stated, the degree of particularity required depending entirely on the nature of the issues falling for decision. The reasoning must not give rise to a substantial doubt as to whether the decision-maker erred in law, for example by misunderstanding some relevant policy or some other important matter or by failing to reach a rational decision on relevant grounds. But such adverse inference will not readily be drawn. The reasons need refer only to the main issues in the dispute, not to every material consideration. They should enable disappointed developers to assess their prospects of the obtaining some alternative development permission, or, as the case may be, their unsuccessful opponents to understand how the policy or approach underlying the grant of permission may impact upon future such applications. Decision letters must be read in a straightforward manner, recognising that they are addressed to parties well aware of the issues involved and the arguments advanced. A reasons challenge will only succeed if the party aggrieved can satisfy the court that he is genuinely been

substantially prejudiced by the failure to provide an adequately reasoned decision."

25. In relation to consistency in decision making, the now classic formulation of that principle in a planning context was given in the judgment of Mann LJ in the case of North Wiltshire District Council v the Secretary of State for the Environment and Clover 65 P & C R 137 at page 145 as follows:

"In this case the asserted material consideration is a previous appeal decision. It was not disputed in argument that a previous appeal decision is capable of being a material consideration. The proposition is in my judgment indisputable. One important reason why previous decisions are capable of being material is that like cases should be decided in a like manner so that there is consistency in the appellate process. Consistency is self-evidently important to both developers and development control authorities. But it is also important for the purpose of securing public confidence in the operation of the development control system. I do not suggest and it would be wrong to do so, that like cases must be decided alike. An inspector must always exercise his own judgment. He is therefore free upon consideration to disagree with the judgment of another but before doing so he ought to have regard to the importance of consistency and to give his reasons for departure from the previous decision. To state that like cases should be decided alike presupposes that the earlier case is alike and is not distinguishable in some relevant respect. If it is distinguishable then it usually will lack materiality by reference to consistency although it may be material in some other way. Where it is indistinguishable, then ordinarily it must be a material consideration. A practical test for the Inspector is to ask himself whether, if I decide this case in a particular way am I necessarily agreeing or disagreeing with some critical aspect of the decision in the previous case? The areas for possible agreement or disagreement cannot be defined but they would include interpretation of policies, aesthetic judgments and assessment of need. Where there is disagreement then the inspector must weigh the previous decision and give his reasons for departure from it. These can on occasion be short, for example in the case of disagreement on aesthetics. On other occasions they may have to be elaborate."

26. Consideration was given to the materiality of emerging allocations in a consultative version of a local plan by Stewart-Smith J in the case of Wainhomes (South West) Holdings Limited v Secretary of State [2013] **EWHC** 597. The framework provides an understanding of the definition "deliverable" in footnote 11 as follows:

"11. To be considered deliverable, sites should >be available now, offer a suitable location for development now and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Sites with planning permission should be considered deliverable until permission expires, unless there is clear evidence that schemes will not be implemented within 5 years, for example they would not be viable, there is no longer a demand for the type of units or sites have long term phasing plans."

27. Having set out some parameters for the interpretation of the question of whether a site was deliverable, Stewart-Smith J went on to set out his conclusions in respect of emerging allocations as follows:

"35. I would accept as a starting point that inclusion of a site in the eWCS or the AMR is some evidence that the site is deliverable, since it should normally be assumed that inclusion in the AMR is the result of the planning authority's responsible attempt to comply with the requirement of [47] of the NPPF to identify sites that are deliverable. However, the points identified in

[34] above lead to the conclusion that inclusion in the eWCS or the AMR is only a starting point. More importantly, in the absence of site specific evidence, it cannot be either assumed or guaranteed that sites so included are deliverable when they do not have planning permission and are known to be subject to objections. To the contrary, in the absence of sites specific evidence, the only safe assumption is that not all such sites are deliverable. Whether they are or are not in fact deliverable within the meaning of [47] is fact sensitive in each case; and it seems unlikely that evidence available to an inspector will enable him to arrive at an exact determination of the number of sites included in a draft plan but are as a matter of fact deliverable or not. Although inclusion by the planning authority is some evidence that they are deliverable, the weight to be attached to that inclusion can only be determined by reference to the quality of the evidence base, the stage of process that the draft document has reached and knowledge of the number and nature of objections that may be outstanding. What cannot be assumed simply on the basis of inclusion by the authority in a draft plan is that all such sites are deliverable. Subject to that, the weight to be attached to the quality of the authority's evidence base is a matter of planning judgment for the inspector, and should be afforded all proper respect by the Court."

28. Ground 3 relates to the role of the Inspector at a hearing. The leading case in relation to this issue is the case of Dyson v Secretary of State 75 P&CR 506. In giving the leading judgment of the Court of Appeal Pill LJ stated at page 512 as follows:

"It is clear that at a hearing there is to be no formal cross-examination and that a hearing is the suitable procedure where "there is no likelihood that formal cross-examination will be needed to test the opposing cases". The intention is to make the procedure "less daunting for unrepresented parties." It is intended "eliminate or reduce the formalities of the traditional local inquiry."

Planning permission having been refused, conflicting propositions and evidence will often be placed before an inspector on appeal. Whatever procedure is followed, the strength of the case can be determined only upon an understanding of that case and by testing it with reference to propositions in the opposing case. At a public local enquiry the Inspector, in performing that task, usually has the benefit of cross-examination on behalf of the other party. If cross-examination disappears, the need to examine propositions in that way does not disappear with it. Further, the statutory right to be heard is nullified unless, in some way, the strength of what one party says is not only listened to by the tribunal but assessed for its own worth and in relation to opposing contentions. There is a danger, upon the procedure now followed by the Secretary of State for observing the right to be heard by holding a "hearing", that the need for such consideration is forgotten. The danger is that the "more relaxed" atmosphere could lead not to a "full and fair" hearing but to a less than thorough examination of the issues. A relaxed hearing is not necessarily a fair hearing. The hearing must not become so relaxed that the rigorous examination essential to the determination of difficult questions may be diluted. The absence of an accusatorial procedure places an inquisitorial burden upon an Inspector."

29. Conclusions

30. As set out above, the allegation in Ground 1 is that the Inspector should not have included an allowance for vacancies and second homes in the setting the FOAN. This involves considering what material is relevant to establishing a FOAN. Firstly, to follow the interpretation of paragraph 47 of the Framework set out above, a FOAN is not the figure for a housing requirement following the

application of the policies in the Framework. It is a figure for the assessment of housing needs prior to the application of policy.

31. So what is the nature of a policy which may in a forward-planning context lead to the adjustment of the housing needs assessment figure? Whilst Sir David Keene referred to a "constrained figure for housing need" for example in paragraph 27 of Hunston, when a housing figure passes through the lens of policy it may increase as well as decrease. It may decrease as a result of the application of policies of constraint such as Green Belt or as a consequence of environmental designations such as an Area of Outstanding Natural Beauty or designated European habitats; see for example footnote 9 to the framework. Housing figures may also increase, for example, as a result of factors such as the desire to foster regeneration led by residential development, or the intention to establish a growth area (as has occurred over the years in some parts of the country). All these policies are environmental or socio-economic in their nature and they are policies which are not associated with the calculation of the FOAN. They influence the figure for the housing requirement to be determined in the forward planning process and thereby create a figure "consistent with the policies set out in this Framework."
32. How then is the FOAN to be arrived at? It is important to read the Framework's paragraph 47 requiring the local plan to meet "the full objectively assessed needs for market and affordable housing in the housing market area" alongside paragraph 159 of the Framework which describes the means of identifying the FOAN, namely the SHMA. It is appropriate, therefore, at this stage to note the terms of paragraph 159 which goes hand in hand with paragraph 47. It provides as follows:
- "159 Local planning authorities should have a clear understanding of housing needs in their area. They should:
- o prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the planned period which:
 - o meets household and population projections, taking account of migration and demographic change;
 - o addresses the needs for all types of housing, including affordable housing and the needs of different groups in the community (such as but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their only homes); and
 - o caters for housing demand on the scale of housing supply necessary to meet this demand."
33. This is clearly not a comprehensive description and further guidance is provided by the first defendant in the Planning Practice Guidance, and in particular in this respect, in paragraphs with reference ID 2a-001-20140306 to 2a-029-20140306.
34. In terms of the first element of the assessment in the first of the sub-bullet points in paragraph 159, namely meeting household and population projections taking account of migration and demographic change, the PPG illustrates that this is a statistical exercise involving a range of relevant data for which there is no one set methodology, but which will involve elements of judgment about trends and the interpretation and application of the empirical material available. These judgments will arise for instance in relation to whether, for example, adjustments for local demography or household formation rates are required (see paragraph ID 2a-014-20140306), and the extent and nature of adjustments for market signals (see paragraph ID 2aa-018-20140306). Judgment will further be involved in taking account of economic projections in undertaking this exercise.
35. At the second stage described by the second sub-bullet point in paragraph 159, the needs for types and tenures of housing should be addressed. That includes the assessment of the need for affordable housing as well as different forms of housing required to meet the needs of all parts of the community.

Again, the PPG provides guidance as to how this stage of the assessment should be conducted, including in some detail how the gross unmet need for affordable housing should be calculated. The Framework makes clear these needs should be addressed in determining the FOAN, but neither the Framework nor the PPG suggest that they have to be met in full when determining that FOAN. This is no doubt because in practice very often the calculation of unmet affordable housing need will produce a figure which the planning authority has little or no prospect of delivering in practice. That is because the vast majority of delivery will occur as a proportion of open-market schemes and is therefore dependent for its delivery upon market housing being developed. It is no doubt for this reason that the PPG observes at paragraph ID 2a-208-20140306 as follows:

"The total affordable housing need should then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led developments. An increase in total housing figures included in the local plan should be considered where it could help deliver the required number of affordable homes."

36. This consideration of an increase to help deliver the required number of affordable homes, rather than an instruction that the requirement be met in total, is consistent with the policy in paragraph 159 of the Framework requiring that the SHMA "addresses" these needs in determining the FOAN. They should have an important influence increasing the derived FOAN since they are significant factors in providing for housing needs within an area.
37. Insofar as Hickinbottom J in the case of Oadby and Wigston Borough Council v Secretary of State [2015] **EWHC** 1879 might be taken in paragraph 34(ii) of his judgment to be suggesting that in determining the FOAN, the total need for affordable housing must be met in full by its inclusion in the FOAN I would respectfully disagree. Such a suggestion is not warranted by the Framework or the PPG for the reasons which I have just set out. As Hickinbottom J found at paragraph 42 of that judgment, what the Inspector did in that case was to exercise his planning judgment, firstly, to conclude that the FOAN was higher than the council's figure and secondly, (again deploying planning judgment) to arrive pragmatically at a figure for the FOAN in order for it to be used to assess the five-year housing land supply. The council's figure was regarded by the Inspector in that case as being short because it failed to properly take account of factors which should have been included in the FOAN, including considering affordable housing need. Understood in this way, references to "policy on" and "policy off" become a red herring. The appropriate figure was for the Inspector's judgment to determine taking account of all the matters involved in finding the FOAN.
38. Thus, when paragraph 47 of the Framework requires the local plan to meet "the full objectively assessed needs for market and affordable housing," that is the figure determined by the SHMA required by the paragraph 159 of the Framework for the purpose of identifying the FOAN. That process, guided by the PPG, seeks to meet household and population projections (taking account of migration and demographic change), and to address the need for types of housing including affordable housing. When a planning authority has undertaken or commissioned a SHMA, that will obviously be an important piece of evidence, but it is not in and of itself conclusive. It will be debated and tested at the local plan examination or (as in the present case) in appeals within the development control process.
39. This is all background to answering the question of whether or not the Inspector was correct to include second homes and vacancies in his assessment of the FOAN in this case. I am satisfied that he was. These elements were empirically based from the 2011 census and indicated a trend whereby a certain portion of the housing in the district was not in fact being used by the indigenous population, and therefore was not available to meet housing need. He was therefore entitled to form the view as a matter of judgment based on the empirical material that an allowance should be made for the prospect of that trend continuing. It is true that this involves a judgment about applying the census-based figure as a trend, but that in my view is precisely the kind of statistical judgment which is involved in determining the FOAN and the Inspector was right to countenance it.

40. Mr Leader contended that it was in reality the application of a policy, namely the perpetuation of the existing quantum of existing homes and vacancies in the housing stock, and therefore as the implementation of a policy it was not a legitimate exercise pursuant to paragraph 47. That argument is ingenious but in my view clearly puts the matter the wrong way round. In the two-stage process envisaged by paragraph 47, (that is to say in summary, firstly, determining the FOAN and secondly applying policy to it), it will be entirely open to the claimant to impose a policy in the second stage to arrest or reverse the number of vacancies or affordable homes in their planned housing stock and that could potentially lead to a reduction in housing requirements. But taking account of the existing extent of vacancy and second homes and projecting it forwards is clearly part of the statistical assessment of housing needs and part and parcel of the FOAN equation at the first stage.
41. The PPG does not provide any specific guidance on this point related to vacancies and second homes. That is to my mind unsurprising, as it could not begin to address every conceivable point which might arise in this exercise. However, I have no doubt that the inclusion of vacancies and second homes is an adjustment based on statistical data of a kind similar to those which are contemplated in the PPG. The absence of this issue from the PPG does not therefore dissuade me from the view which I have reached.
42. As I have indicated above, my attention was drawn to the fact that the PPG in paragraphs reference ID3-012-20140306 and 3-039-20140306 does address the question of vacancies but in the context of them forming an element of potential supply. It permits an allowance for bringing homes back into use if that is supported by robust evidence from the planning authority. The existence of that guidance does not however assist in answering the question which arises in this case. Simply because a reduction in vacant homes has the potential to provide an element of supply does not render it illegitimate or inadmissible to account for the existing trend of vacant or second homes as a factor influencing the statistical exercise of determining the FOAN before supply questions arise.
43. As I have indicated, the elements of the PPG which address the question of the calculation of the FOAN support the interpretation that finding the FOAN requires an analysis of the relevant statistical and econometric data and trends. Against that background, there is no difficulty in concluding that census data about vacancies and second homes are a species of the data to be taken into account in the calculation. Ground 1 therefore fails.
44. That has implications for the remainder of the case. At the hearing of the appeal, the second defendant produced a table setting out the various figures which were candidates for the five-year supply calculation. The figure including second homes and vacancies for the five-year requirement as found by the Inspector (and upheld under Ground 1) was 5,836 homes with a five per cent buffer and 6,670 homes with a 20 per cent buffer. Even if the claimant's supply figure was to be preferred in total, the claimant could only demonstrate a five-year supply if the buffer was five per cent and not 20 per cent. In short, therefore, the claimant would have to succeed on all other issues before the court in order to succeed in showing they had a five-year supply once it is determined as I have that the Inspector made the correct conclusion as to the appropriate figure for the FOAN.
45. Turning to Ground 2, it is convenient, therefore, to look first at the complaint which is raised about the Inspector's reasoning in relation to the appropriate buffer. The context of that complaint is the 2012 Inspector's decision. The concern raised is that the decision that the claimant was a 20 per cent authority is not adequately reasoned or explained in circumstances where the 2012 Inspector found them to be a five per cent authority. How could it be that with such a short intervening period and little by way of additional annual monitoring data that the outcome could be so different?
46. True it is that the Inspector did not directly address the conclusion of his colleague in 2012 but the point appears in her decision, as will be seen from the quotation I have provided above, uncontentiously and without explanation. As is clear from the North Wiltshire case, the Inspector was not bound by it. In paragraph 9 of his decision letter, the Inspector sets out fully the reasons for his judgment that the claimant has been responsible for persistent under delivery. That is in the form of the claimant's failure to achieve the Core Strategy average for the past six years with an overall average which was well below it. The Inspector notes the claimant's arguments about the long term trend but observes that that long term trend is still behind the target with an accumulated shortfall to date. In my

view his reasons are absolutely clear. Since the 2012 Inspector provided no reasons for her conclusions, nothing further was required in my view to explain why the Inspector had decided as he did.

47. The other reasons arguments within Ground 2 must start from the understanding that in paragraph 13 of the decision letter the Inspector accepted in entirety the calculation of the five-year housing land supply undertaken by the second defendant and that there was but a 1.91 year housing land supply. In that this figure was based upon the requirement figure employing the allowance for second homes and vacancies as well as the backlog, there is no substance in the claimant's complaint that it is not clear what figure the Inspector concluded upon. The derivation of the figures was clearly set out in the evidence and did not in my view require setting out further in the decision letter as they were well-known to the informed reader of the decision. The reasons for the conclusions which the Inspector reached on the FOAN are fully set out in paragraph 7 of the decision letter, where he makes clear that second homes and vacancies should be accounted for as part of the exercise of turning household figures into dwelling numbers. In my view clear and sufficient reasoning was provided for his decision.
48. To some extent the same analysis can be deployed in relation to the question of small windfalls. There were two competing figures and in concluding that the supply was 1.91 years, the Inspector accepted the second defendant's figure. In paragraph 11 of the decision letter he explains he is unpersuaded that large site windfalls should be allowed for on the basis that the allocation process should identify most of that type of site. He does not however, discount small site windfalls, and he includes the lower figure adopted by the second defendant. As the hearing note discloses, the 268 figure was derived from a five to ten year average of small site windfalls and the derivation of the figure was therefore known.
49. There is some concern, however, in my view, about what is absent from the reasoning. What is absent is an explanation for the choice between the figures for small site windfalls which in my view could and should have been provided, albeit briefly. That said, however, this was a dispute over but 202 dwellings which would not have affected the overall and critical conclusion as to whether or not a five-year supply actually existed and therefore I am not persuaded that the claimant suffered any substantial prejudice as a result of the absence of an explanation.
50. Finally in respect of Ground 2, the question arises as to the emerging site allocations. Here again, in my view, the claimant has legitimate cause for concern since the Inspector's conclusions inferentially reject their inclusion by his acceptance of the second defendant's calculation, but the reasons are entirely silent as to why that is the case. The hearing note from the second defendant's consultant records that there was discussion at the hearing about this element of housing supply, but there does not appear any conclusion at all in the Inspector's decision as to why they were excluded. Perhaps in the light of Wainhomes case, and given the very embryonic nature of the allocations in a plan which had yet to be consulted upon and about which objections were unknown, it is possible to hazard a guess as to why the Inspector would have afforded them no weight and excluded them. But that would be speculation and in my view it was a matter which required some, albeit brief, explanation. Again this was a failing in the reasoning but again it did not cause any genuine or substantial prejudice to the claimant as in the light of earlier matters even including this source of housing would not have affected the important and determinative question of whether or not the claimant had provided for a five-year housing land supply. In those circumstances ground 2 must fail.
51. Turning to Ground 3, it is important to separate off what Ground 3 is not about at the outset. At one point before the hearing and in the written arguments it appeared to be suggested that this ground might be about whether the claimant, and in particular Mr Jermany, should have asked for an adjournment. It is not about that issue and in my view no possible criticism could be raised in relation to Mr Jermany's approach to the hearing. Indeed it is fair to recall that Mr Simons, who appeared on behalf of the first defendant, endorsed that approach and was rightly keen during the course of his submissions to point out that there was no criticism of Mr Jermany's conduct or participation at the hearing.
52. The point is this. At the hearing the Inspector is in charge, and the purpose of the hearing is for the Inspector to test and explore the evidence with the assistance of the parties and by means of a

structured discussion of the issues. This is the substance of his inquisitorial role identified in the case of Dyason. It is of course open to the parties if they feel disadvantaged, or that an event has occurred in the procedure which renders it unfair, to ask for an adjournment or for some other suitable relief from the Inspector. But at all times it is for the Inspector to be on top of matters and ultimately if he cannot discharge his inquisitorial duty because of late material, then he must adjourn or regulate the procedure accordingly. There is a sense in which that analysis of the approach and involvement of the Inspector at the hearing is an answer to the claimant's complaint. They may well feel (and others might agree) that it would have been prudent for the Inspector to take a little time to read the material which he had only just received and to give consideration to whether or not the agenda or the questions he wish to explore needed to be adjusted, but ultimately that was a matter for his judgment. He clearly considered that he could explore the issues and get what he needed from the debate without doing so.

53. There is a risk in not taking time to assimilate the material and that risk is obvious. It may be that on mature reflection the material may not have been properly or fully understood which may lead to proceedings needing to be reopened. Worse still, it may lead to erroneous decisions or decisions that are based on a misconception about the evidence. However, those risks did not materialize in this case. I am not prepared to accept that the absence of reasoning which I have set out above is evidence of that failure or evidence of an unfair procedure and a failure to properly discharge the inquisitorial burden. Those failures are rather simply the failure to provide fuller explanation of conclusions in relation to issues which there is no doubt the Inspector fully understood. Thus there was no unfairness in the procedure nor did the Inspector fail to discharge his inquisitorial role in undertaking the hearing adopting the procedure which he did.

54. For reasons which I have set out above, each of the three grounds on which this claim has been advanced by the claimant must be dismissed.

A2. AFFORDABLE HOUSING TRAJECTORY

Table A2.1 Affordable Housing Pipeline

Ref	Site Name	Ward	NI Affordable	BP 5Yr Affordable	Notes	Total Pipeline	NI est. 5 year delivery
BBE01	Wesley Street	Bamber Bridge East	0	9	Completed	0	0
	McKenzie Arms	Bamber Bridge East	15		BP not considered. Site has full PP, in control of the Council which is intending to deliver in the 5 year period.	15	15
2057	Pearson House	Bamber Bridge West	9	9	No dispute	9	9
2079	Olive Farm	Coupe Gr & Gregson Ln	30	30	No dispute	30	30
	Brindle Rd (P1 Persimmon)	Coupe Gr & Gregson Ln	78	12	Full PP (07/2017/2325/FUL) for 261 dwellings incl 30% AH granted at appeal Dec-18. Council expects 1st completions 2023/4 and 40 dwellings in 5 year period. BP assumptions consistent with phased delivery of AH which is considered reasonable for this site.	78	12
BBE02c	Brindle Rd (P2 Bellway)	Coupe Gr & Gregson Ln	39	38	Full PP granted at appeal for 193 dwellings on 31st Aug 2018 (07/2017/2900/FUL). Under construction. Council expects 170 units (i.e. remaining dwellings) in the 5 year period. Site not disputed	39	39
	Grasmere Avenue	Farington East	0	17	Affordable units completed	0	0
	Cuerden Strategic Site	Farington East	38		Not included as deliverable site in the Council's 5YLS and therefore not assumed to deliver in 5 year period.	38	0
FW02g	Croston Road (Kier)	Farington West	27	24	Has RM consent (07/2019/2313/REM) dated June 2019 for 174 units. U/C. 157 units to be delivered in the 5 year period. RP handover schedule confirms all AH will be delivered by 2024, with S106 requiring all AH to be constructed prior to occupation of 118th home.	27	27
FW02a(i)	Croston Road (Keepmoat)	Farington West	96	31	Total AH delivery = 96, this includes 15% AH on main site of 399 (07/2020/00544/REM) and 30% on additional land parcels of 121 (07/2020/00552/FUL) but will be delivered in a blended way across the site as a whole and so not split in accordance with the permissions. RP programme scheduled 66 AH completions within Phase 1 between Apr 21 and Mar 25.	132	66
FW02	Croston Road (Miller)	Farington West	0	3	Completed	0	0
MS02	Test Track (Phase 2)	Moss Side	59	11	Hybrid consent, including detailed for 1st phase of 197 dwellings and outline for between 653-753 dwellings (07/2017/3361/ORM) granted Nov 2019. 105 of the 197 in Phase 1 included in 5YLS. David Wilson and Barratts Outlets. On pro-rata basis, 31 would be delivered in 5 year period. S106 anticipates 41 AH completions by occupation of 97 market homes = minimum 138 completions.	59	31
MS02	Test Track (Phases 3-5)	Moss Side	226		Doesn't appear to have been included in HLS. Outline only. Not included delivery from this site within 5 year period.	226	0
LOW01b	Altcar Lane (Redrow P1)	Seven Stars	47	30	RM consent and under construction (07/2020/00935/REM and 07/2018/1674/REM). Overall capacity for 246 dwellings, of which 9 completed in 2019/20. Council assumes 151 completions in 5 year period. 20% on-site affordable and 10% offsite. Developer projections anticipate all AH to be completed by 2024	47	47
	Altcar Lane (Redrow P2)	Seven Stars	31		Remaining land with outline consent. Does not appear to be included in 5YLS	31	
LOW01a	Altcar Lane (Lovell)	Seven Stars	39	32	RM granted for 200 dwellings in Sept 2018 (07/2018/3247/REM). 159 units remaining of which all expected to be built in 5 year period. Lovell are Homes England delivery partner.	39	39
	Gas Works	Walton le dale West	28	18	RM consent for 281 dwellings from 2015 (07/2015/0315/REM) to Morris Homes. 236 dwellings remained at base date of which 175 expected in the 5 year period at 35 dpa. All AH to be completed prior to occupation of 202 (80%) market, and therefore all AH would be completed within 5yrs.	28	28
Total			798	264		798	343
